Continental Equipment manufactures custom engineered industrial power spray washers for the metal cleaning and finishing industries. The cabinet style washer is a universal system serving a wide variety of OEM manufacturing applications.

It is designed for batch production utilizing a powered rotary turntable. Applications for this equipment includes general cleaning of parts placed in

various sizes. All equipment is designed specific to the application. System designs include one or two stage units for most cleaning applications.

Equipment construction can include carbon steel or stainless steel tanks, housing, and turn table. The heavy duty turntables are furnished in sizes from 24" diameter to 84" and are a fully welded fabrication. The

turntable assembly includes machined spindle and bearing support components.

Spray piping can be furnished in black iron, stainless steel or CPVC materials. Vertical process

open wire baskets or frames, and cleaning of castings, fabrications or assemblies of

spray pumps used in these systems are supplied in all iron, stainless fitted or all stainless

steel depending on the type of solutions used for the application. Standard features include marine type tank clean out doors, automatic tank liquid level controls, housing access doors, tank extensions with access doors, overflow and tank drain connections, pump protection screens, washer housing exhaust fans, and slopped tank bottoms.

Natural gas, electric or steam heating systems can be furnished.

A pre-wired electrical control system is included with every washer system. A NEMA 12 enclosure is used to house NEMA or IEC electrical components including the main disconnect switch. The door mounted push buttons, indicating lights and temperature controls are also included. We can also provide special electrical controls such as programmable logic control (PLC) systems including installation, programming and documentaion.

Other equipment such as pneumatic door operation, oil removal, filtration, blow off, and chemical controls are also available.

Whatever components are included in the system. all equipment is completely shop assembled, plumbed, wired and fully tested prior to shipment.

Please contact Continental Equipment for additional information.
