The flat belt washer is the most universal type of cleaning machine available. They can be furnished in very basic configurations that can effectively clean the majority of metal parts in all shapes and sizes. They can also be furnished with material handling equipment to process specialized machined components, furnished in single or multi-stage designs, and with most popular heating systems.

Whatever the product and process, Continental Equipment has the expertise to provide belt type washer systems to fit virtu-

ally every cleaning application. We pride ourselves in providing washer systems that are custom designed to your application. Design can include standard or special fixture type conveyors

The lower photo shows a multi lane-multi stage belt washer for processing castings. Included are filtration systems for each spray pump, high pressure blow off system and a gas fired dryer.

Center Photo (above) shows a multi-stage belt washer to thoroughly clean automotive radiator cores and heat exchangers prior to the application of solder flux. All equipment is furnished with stainless steel components.

specific to your product, solution spray equipment in many spray patterns and system pressures.

A few of the basic features of our heavy duty washing and cleaning equipment include,

- Large tanks for infrequent cleaning and replenishing.
- Water conservation process flows.
- Large access doors in the process spray zones for spray nozzle and pipe maintenance.
- Marine doors for unobstructed access for tank cleaning.
- Automatic liquid level control .
- Low liquid cut out switches for automatic shut down of the heating system.
- Dual cleanable pump screens.

The tanks and housings can be furnished in carbon steel or stainless steel. To enhance the cleaning capability of any Continental washer, additional optional equipment is available.

- Stainless steel construction.

- Filtration systems.
- Oil removal systems.
- Interstage and final blow off
- Hot forced air dryers.
- Solution concentration controls.

All systems are completely fabricated, assembled, and tested in our shop prior to shipment and in the presence of our customers.

Call, or e-mail Continental Equipment and allow us to evaluate your products and cleaning requirements.
