Continental Equipment manufactures custom engineered industrial power spray washers for the metal cleaning and finishing industries.

The monorail washer is a universal system serving a wide variety of OEM manufacturing applications. It is designed for mass production utilizing an overhead trolley monorail or power and free conveyor. Applications for this equipment includes general parts cleaning and surface preparation for primary or finish coatings. All equipment is designed

specific to the application. System designs include multi-stage units from one stage to three stages for general parts

Right photo - electrical control panel. Bottom photo-gas heating system

cleaning to five, seven, or nine stage units for phosphating surfaces for painting applications.

Equipment construction can include carbon steel or stainless steel tanks and housings. Spray piping can be furnished in black iron, stainless steel or CPVC materials. Vertical process spray pumps used in these systems are supplied in all iron, stainless fitted or all stainless steel depending on the type of solutions used for the application.

Standard features include quick disconnects on all spray pipes, clip on nozzles, marine type tank clean out doors, automatic tank liquid level controls, housing access doors, tank

extensions with access doors, overflow and tank drain connections, pump protection screens, washer housing exhaust fans, and sloped tank bottoms.

While the natural gas combustion heating system is common, electric or steam is also available.

A pre-wired electrical control

system is included with every washer system. A NEMA 12 enclosure is used to house NEMA or IEC electrical components including the main disconnect switch. The door mounted push buttons, indicating lights and temperature controls are also included. We can also provide special electrical controls such as

programmable logic control (PLC) systems including installation, programming and documentaion.

Other equipment such as oil removal, filtration, blow off, and chemical controls are also available. Whatever components are included in the system, all equipment is completely shop assembled, plumbed, wired and fully tested prior to shipment.
