In many applications,
 parts must be completely

Typical features of a
 Continental oven include

designed for uniform air
 distribution throughout the
 work chamber, and an exhaust
 system for evacuation of the
 moisture. Heating equipment is
 available in gas, oil, electric and
 steam. A complete electrical
 control system is supplied with
 all the required safety
 components to comply with
 NEC, NFPA and FM/
 IRI insurance
 regulations.

What this all means
 to you is that you
 can call on
 Continental
 Equipment Corp to
 provide quality
 equipment for any
 application. Our
 sales staff,
 engineering and
 manufacturing
 facilities have the
 capability of
 meeting your
 requirements by

dry. Continental
 Equipment designs and
 manufactures drying
 systems to complement
 the washing equipment -
 in both the flat belt and
 overhead monorail
 conveyor designs. Dryers
 are offered in various
 configurations with
 dwell times and
 operating temperatures
 capable of meeting the
 required drying results.

low conductivity insulated
 walls fabricated from
 tongue and panels for
 minimum heat losses, heavy

providing high quality
 equipment that will serve you
 for many years.

Continental Equipment
 can also provide ovens
 for general part and
 process heating in
 temperatures up to
 800°F. Our experience
 also includes paint
 finishing systems which
 typically consist of a multi
 zone surface preparation
 washer, dry off oven,
 paint bake oven, material
 handling equipment, and
 electrical controls.

structural steel frame for
 uniform strength
 throughout the entire
 assembly, a powered re-
 circulating air system
 complete with duct work
